Assignment 3 _Descriptive statistics

- Result:

```
# A tibble: 4 × 5
  Region      variable      n mean  sd
  <chr>      <chr>    <dbl> <dbl> <dbl>
1 Africa    Happiness.Score  60  4.60 0.982
2 AsiaPacific Happiness.Score  24  5.34 0.996
3 Europe    Happiness.Score  50  5.90 0.96
4 PanAmeric Happiness.Score  24  6.24 0.767
```

- What do you learn from the result?

What I was able to get from this result is related to the happiness score. The mean of happiness score in Africa is 4.60, the lowest among the four regions. On the other hand, PanAmeric happiness score is the highest at 6.24. What I can see from this is that not only has a lot of regional development already been done, but the higher the level of life of citizens, the higher the happiness score.
